Examples using a mifare® Ultralight card

When a mifare® Std card with the ID number of 00070000B06304 is read the reader will output the following:

| 56 bit dec with leading zeros (always 17 digits) | 00007696592954116 | | | |
|--|--|--|--|--|
| 56 bit hex without leading zeros (max 14 digits) | 70000B06304 | | | |
| 56 bit dec reverse order with leading zeros (always 17 digits) | 01235507472238336 | | | |
| 56 bit hex reverse order without leading zeros (max 14 digit | s)463B000000700 | | | |
| 48 bit dec without leading zeros (max 15 digits) | 7696592954116 | | | |
| 48 bit hex with leading zeros (always 12 digits) | 070000B06304 | | | |
| 48 bit dec reverse order without leading zeros (max 15 digits | 109607565395712 | | | |
| 48 bit hex reverse order with leading zeros (always 12 digits) | 63B000000700 | | | |
| 40 bit dec with leading zeros (always 13 digits) | 0000011559684 | | | |
| 40 bit hex without leading zeros (max 10 digits) | B06304 | | | |
| 40 bit dec reverse order with leading zeros (always 13 digits) | 755914245888 | | | |
| 40 bit hex reverse order without leading zeros (max 10 digits)B000000700 | | | | |
| 32 bit dec without leading zeros (max 10 digits) | 11559684 | | | |
| 32 bit hex with leading zeros (always 8 digits) | 00B06304 | | | |
| 32 bit dec reverse order without leading zeros (max 10 digits) 1792 | | | | |
| 32 bit hex reverse order with leading zeros (always 8 digits) | 00000700 | | | |
| 24 bit dec with leading zeros (always 8 digits) | 11559684 | | | |
| 24 bit hex without leading zeros (max 6 digits) | B06304 | | | |
| 16 bit dec without leading zeros (max 5 digits) | 25348 | | | |
| 16 bit hex with leading zeros (always 4 digits) | 6304 | | | |
| Custom format 1 | 8x[DELETE]92954116 | | | |
| Custom format 2 | 000000000115596843 | | | |
| 40 bit dec reverse order with leading zeros (always 13 digits) 40 bit hex reverse order without leading zeros (max 10 digits) 32 bit dec without leading zeros (max 10 digits) 32 bit hex with leading zeros (always 8 digits) 32 bit dec reverse order without leading zeros (max 10 digits) 32 bit hex reverse order without leading zeros (max 10 digits) 32 bit hex reverse order with leading zeros (always 8 digits) 24 bit dec with leading zeros (always 8 digits) 24 bit hex without leading zeros (max 6 digits) 16 bit dec without leading zeros (max 5 digits) 16 bit hex with leading zeros (always 4 digits) Custom format 1 | 755914245888 \$)8000000700 11559684 00B06304) 1792 00000700 11559684 B06304 25348 6304 8x[DELETE]92954116 | | | |

Custom format 1

When this format is selected the following keyboard sequence is outputted:

8 x [DELETE] key

8 decimal digits (the last 8 digits of the full 56 or 32 bit decimal number of the card).

Custom format 2

When this format is selected the following keyboard sequence is outputted:

19 decimal digits which include at least 8 leading zeros, the 10-digit decimal conversion of the last 32-bits of the card, and a modulus 10 checksum digit.

Tuning the antenna

Under the back cover is a variable capacitor which may need to be adjusted to re-tune the antenna for different environments or different cards. To tune the antenna, switch SW6, SW7, and SW8 on (tune mode). Now put a card in the field and adjust the variable capacitor until the unit is beeping repeatedly (beep...beep...beep...beep...). The best tuning is when the gap between beeps is shortest.

738-52 RFV4

USB Keyboard mifare * UID Reader Data Sheet

Overview

The USB keyboard mifarereader connects to a PC via USB. It reads the unique ID code from a mifare card and outputs the code in the form of keystrokes which enables the user to capture the UID of the card into any PC application which accepts keyboard entry.

A 10-way DIP switch on the back of the unit is used to select the required output format. A green LED and a beeper are used to indicate a successful read and a red LED indicates an error condition.

The reader has a type B USB socket and when connected to the PC the device enumerates as a Human Interface Device (HID) class device.

Specifications

Power requirements - USB powered 4.40V - 5.25V. Current consumption is typically 80 mA. RF Frequency: 13.56 MHz.

Card types supported: mifare® Std. Plus. Ultralight. DESFire. mifare Plus S/X..NTAG2XX

Contactless interface as per specification: ISO/IEC 14443 Type A.

Output formats: Hexadecimal or decimal digits with or without leading zeros.

Length formats: 56 bit, 48 bit, 40 bit, 32 bit, 24 bit or 16 bit number.

Termination options: None, ENTER,

Operating temperature range: 0°C - +50°C.

Weight: 185 grams.

Dimensions: 118 x 54 x 21 mm.

Connections

To install this reader:

Connect the reader to the PC with a "A male-B male" (printer type) USB cable.

Output Mode Selection

The 10-way switch is used to select the output format, length and termination as per the following tables:

Leading zeros (SW1)

| | SW1 |
|--------------------------|-----|
| Leading zeros included | ON |
| Leading zeros suppressed | OFF |

Decimal/hexadecimal (SW2)

| | SW2 |
|--------------------|-----|
| Decimal format | ON |
| Hexadecimal format | OFF |

Length (SW3-5)

| | SW3 | SW4 | SW5 |
|--------|-----|-----|-----|
| 56 bit | OFF | OFF | OFF |
| 48 bit | OFF | OFF | ON |
| 40 bit | OFF | ON | OFF |
| 32 bit | OFF | ON | ON |
| 24 bit | ON | OFF | OFF |
| 16 bit | ON | OFF | ON |

The reader reads all available bits of the mifare® card (56 bits for mifare® Ultralight and mifare® DESFire; 32 bits for mifare® Std) but many applications require a shorter number. The length of the number is determined by the number of bits taken from the card and the format chosen (hexadecimal or decimal).

Order (SW6)

| | SW6 |
|--|-----|
| Reverse order - least significant byte first | ON |
| Normal order - most significant byte first | OFF |

Special formats

| | Note | SW7 | SW8 |
|-----------------|------|-----|-----|
| Standard | 1 | OFF | OFF |
| Custom format 1 | 2 | OFF | ON |
| Custom format 2 | 3 | ON | OFF |
| Tune mode | 45 | ON | ON |

Notes:

- 1. SW1-6 will determine the exact output. See examples below.
- 2. When Custom format 1 is selected, SW1-SW5 are ignored.
- 3. When Custom format 2 is selected, SW1-SW5 are ignored.
- 4. For Tune mode, SW9 must also be OFF and SW6 must be ON
- 5. See 'Tuning the antenna' at the end of this document.

Termination (SW9)

The reader will generate the following keystroke after the number:

| | | SW9 |
|---|-------|-----|
| П | None | OFF |
| | Enter | ON |

Keyboard layout (SW10)

| | SW10 |
|------------------------|------|
| English keyboard | OFF |
| International keyboard | ON |

If SW10 is ON the reader outputs ASCII codes instead of scancodes. This has the advantage of being keyboard layout independent, but the speed of output is slower.

Examples using a mifare® Std card

When a mifare Std card with the UID number of 15B40BF2 is read the reader will output the following:

| 56 bit dec with leading zeros (always 17 digits) | 0000000364121074 | | | |
|--|--------------------|--|--|--|
| 56 bit hex without leading zeros (max 14 digits) | 15B40BF2 | | | |
| 48 bit dec without leading zeros (max 15 digits) | 364121074 | | | |
| 48 bit hex with leading zeros (always 12 digits) | 000015B40BF2 | | | |
| 48 bit hex reverse order with leading zeros (always 12 digits) | 0000F20BB415 | | | |
| 48 bit dec reverse order without leading zeros (max 15 digits |)4060853269 | | | |
| 40 bit dec with leading zeros (always 13 digits) | 0000364121074 | | | |
| 40 bit hex without leading zeros (max 10 digits) | 15B40BF2 | | | |
| 32 bit dec without leading zeros (max 10 digits) | 364121074 | | | |
| 32 bit hex with leading zeros (always 8 digits) | 15B40BF2 | | | |
| 32 bit hex reverse order with leading zeros | F20BB415 | | | |
| 32 bit dec reverse order without leading zeros | 4060853269 | | | |
| 24 bit dec with leading zeros (always 8 digits) | 11799538 | | | |
| 24 bit hex without leading zeros (max 6 digits) | B40BF2 | | | |
| 24 bit hex reverse order without leading zeros (max 6 digits)BB415 | | | | |
| 24 bit dec reverse order with leading zeros (always 8 digits) | 00766997 | | | |
| 16 bit dec without leading zeros (max 5 digits) | 3058 | | | |
| 16 bit hex with leading zeros (always 4 digits) | OBF2 | | | |
| Custom format 1 | 8x[DELETE]64121074 | | | |
| Custom format 2 | 000000003641210749 | | | |
| | | | | |
